To Whom It May Concern,

I am pleased to share my assessment of Pietro Bertozzi's curricular internship at Altea TS. Pietro is a Master's student in Computer Engineering at the University of Bologna, whom I personally selected to join our company in July 2026. Pietro has since contributed to AKI (Altea Knowledge Intelligence), a strategic initiative within Altea Federation focused on enterprise AI and knowledge infrastructure. Following his initial period at Altea TS, he joined Cloudsome's engineering team, working directly alongside its engineers on research and software architecture. As the only intern involved in this key initiative, Pietro has been entrusted with responsibilities requiring an unusual degree of technical initiative and independence for someone at his stage of professional development.

Pietro's contributions have focused on AI-driven information retrieval across enterprise databases and data warehouses. His work has involved formulating technical hypotheses, developing scripts to test them, and experimentally evaluating alternative approaches and architectural trade-offs. More recently, he has shown particular initiative in investigating caching strategies to improve the cost efficiency of LLM inference, independently proposing ideas and designing experiments to assess their potential. While confidentiality obligations limit the disclosure of specific implementation details and experimental results, I can attest to the rigor of his approach and his ability to turn complex technical questions into structured, testable investigations.

What distinguishes Pietro is how quickly he becomes effective in unfamiliar and open-ended engineering environments. He learns new concepts rapidly, identifies the central questions in problems that are not yet clearly defined, and contributes thoughtfully to technical discussions rather than waiting for detailed instructions. He is reliable, communicates clearly, responds constructively to feedback, and manages his responsibilities effectively even with limited day-to-day supervision. Based on my observations and on the feedback received from the project team, his initiative, technical abilities, and professional maturity are well beyond what I would ordinarily expect from a Master's-level intern.

Pietro's curricular internship has been a highly successful experience. The quality of his work and the positive feedback received from the team have led us to plan a continuation of his involvement in AKI through a further internship, formally hosted by Altea TS and carried out operationally with Cloudsome. This next stage is expected to extend his contribution into development and implementation activities. Given the research-oriented nature of the project, some of its findings may also be considered for future technical or scientific publication, subject to further development and internal approval. I am confident that Pietro has the technical foundation, initiative, and professional qualities to excel in demanding software engineering and AI research and development environments.

Sincerely,

Daniele Varotto

Head of Innovation R&D
